Interior Doors

Interior Doors From Tri-Creek

Our Interior doors offer a myriad of opportunities to express your unique style, from their design and materials to how they enhance your home's ambiance.

With our special order doors, you unlock a world of possibilities:

Expressive Styles

Our doors are available in a diverse range of styles, such as minimalist, neoclassical, baroque, and high-tech. While minimalist doors exude simplicity, neoclassical and baroque doors boast intricate and ornate designs.

Material Selection

Opt for solid wood doors to enhance sound insulation and achieve a natural aesthetic. Alternatively, choose hollow core or lightly glazed doors for a lighter option, ideal for rooms where auditory transparency is essential.

Harmonizing Decor

Your interior door style should harmonize with your home's overall decor, taking into account your furniture, color palette, and other decorative elements.

Creative Mix and Match

Embrace creativity by mixing and matching different interior door styles to infuse intrigue into your home's design. Ensure that the doors harmonize with each other and the surrounding decor. Revitalize old interior doors by updating the hardware, painting, adding molding, applying wallpaper, or transforming them into panel doors. Embrace the popular trend of frameless doors, which seamlessly blend into the wall, creating a smooth transition between rooms without visible frames or hinges.

Measuring Doors

When measuring an interior door, you'll want to consider the following:

Width

Measure the door horizontally at the top, middle, and bottom, and record the smallest measurement.

Height

Measure the door vertically at the left, middle, and right sides, and record the smallest measurement.

Thickness

Most interior doors are 1-3/4 in thick. You can measure the thickness of the door by measuring the door jamb or holding the tape measure across the inner edge of the door.

Rough-in measurement

To calculate the rough-in measurement, add 2 in to the width measurement of the door and 2 in to the height. This measurement applies to both pre-hung and non-pre-hung doors.

Hinges

Measure down from the top of the door to the top of each hinge, and measure the width and height of each hinge.

Bore

Measure the distance from the top of the door to the center of the bore (hole for the handle).

Frame

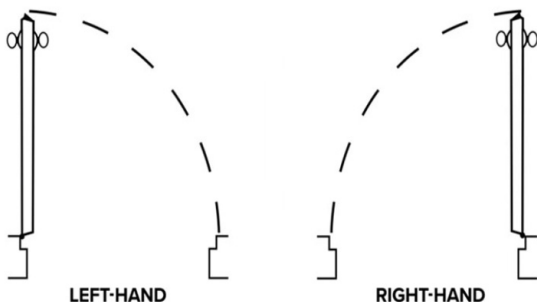

Measure the width and height of the frame, but do not include the trim.

While these are general guidelines, some manufacturers may offer different sizes. It's best to measure the actual opening in your home before purchasing a new door.

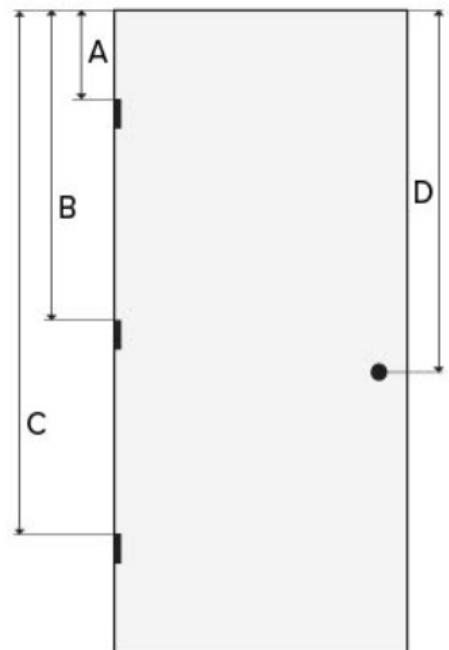

Swing

The easiest way to determine the handing is to stand with your back to the hinges. If the door swings to your left, it is a left-handed door. If the door swings to the right, it is a right-handed door.

Door Swing

Measuring Hinge and Bore

Understanding Styles

Hollow Core Doors

The most common door type in many new builds and starter homes is hollow core doors because they are often more affordable than the alternatives. Usually made of a thin layer of wood or fiberboard, these doors are lightweight and easy to install. However, they offer significantly less durability, insulation and sound-dampening ability than their counterparts, making them a better choice for areas with less foot traffic, like closets and pantries

Solid Wood Doors

Beloved for their classic look and feel, as well as quality, solid wood doors offer a balance of style and longevity to homeowners. With added density, they provide more insulation, durability and sound-dampening capabilities than hollow core doors. You can also customize interior wood doors in various finishes and designs to match them seamlessly with your interior decor, whether you prefer a minimalist, rustic or elegant look.

Solid Core Doors

Solid core interior doors combine the best aspects of hollow core and solid wood doors into one superior solution. Of course, when it comes to solid core vs hollow core doors, the only upside to hollow core is its lower price point. But solid core doors, often made with composite wood materials, are a high-quality option that is less expensive and provides added durability and sound-dampening capabilities. In the long term, they're well worth the investment.

Logan 2 Panel

This simple-yet-timeless design fits in well with most home styles, especially Craftsman and traditional ones. Use the Logan 2 Panel as an office door to separate your workspace from any chaos that may be going on in the rest of the house.

Lincoln Park 1 Panel

Similar to the Logan, but with one panel instead of two, the versatile design of the Lincoln Park is highly compatible with many home styles. It fits best in transitional and modern spaces and is used here as a bathroom door.

Livingston 3 Panel

In contrast to the simple recessed panels of Logan and Lincoln Park, the Livingston door features three molded panels that provide architectural detailing and elegance to any room. Here it's used as a bedroom door.

Winslow 3 Panel

Clean lines are a central part of this Winslow solid core door. With three Shaker-style recessed panels, Winslow is most compatible with Craftsman homes and is seen here as a laundry room door.

French doors

These doors, characterized by their glass panels, are perfect for creating an elegant transition between rooms while allowing natural light to pass through, making spaces feel brighter and more connected.

Barn doors

The sliding mechanism on barn doors can help you save floor space, making them ideal for smaller rooms or areas with limited door swing space.

Specialty doors

Specialty doors bring an added touch to a space, with etched frosted glass designs that also provide privacy. Shop specialty doors like our full-length mirrored door, or those for a pantry, wine cellar or laundry room.
